

Japan

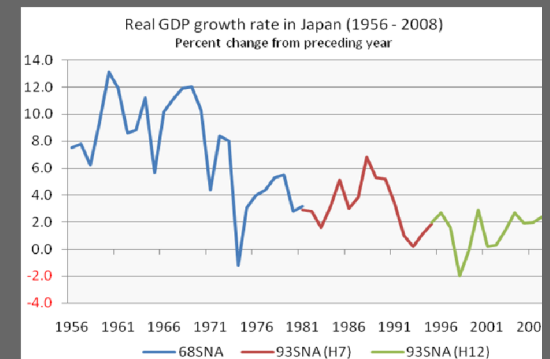

Capital city: Tokyo

Population: 127,253,075

Language: Japanese

The climate of Japan is weird because the north of Japan is winters are cold and snowy and on summers they are mild. The phisycal environment of Japan is several thousand Islands the biggest islands are Hokkaido, Kyushu, Honshu, and Shikoku. Japan has lots of earthquakes because they are in the ring of fire. The biggest mountain in Japan is Mount Fuji it is 3776 meters tall and it is actually a volcano it erupted in 1708. Japan's soil is rich and that is because of the volcano ash. The natural resources of Japan are the ocean and rice.

This chart represents how much Japan's population has grown from 1956-2006. The population of Japan has gotten lower.

The physical environment in Japan affects Culture diffusion in some ways. To Begin, Japan is surrounded by water so it's harder to trade ideas with cultures. Even though Japan has difficuties with trading culture ideas Korea introduced one of the 2 main relidions that Japan has today. Korea introduced Buddhism to Japan, but chinese formed Buddhism. Next,migrants bring culture diffusion to Japan. Migrants though don't move to a place where there is lots of natural disaters and not so much natural resourcesso it makes it harder to get cultural diffusion. Japan has some culture diffusion, but the physical environment affects it.

The physical environment affects trade patterns in many ways. Initially,Japan doesn't have so much natural resources like oil and things like that. Next, Japan is surrounded by water so it is hard to trade back and fourth with countries. Japan though does trade with some countries like there was this minor trade between China and Japan they traded bronze minted coins. Japan has some trouble trading because of its physical environment.

The physical environment affects Japan's economy in some ways. Initially Japann has lots of natural disasters which destroys buisnesses. For example Japan has many earthquakes because several contenetial places meet and they are in the ring of fire so that makes it harder on buisnesses they built and destroy, and that costs lots of money. Next, Japan's economy started to recover from 20 years of deflatronary period and recession. The terrible earthquake made them fall back and the ecomy was kinda falling. The physical environment affects Japan's economy, but they earn lots of money.
